

## Hawkesbury floods of October 2022 – Time lapse videos

### Description

---

Here is a compilation of time-lapse footage of nine different locations around the Hawkesbury district, showing the effects of the October floods that struck us recently. Each location has had up to a week's events compressed into under thirty seconds, comprising ~64,000 frames run together.

Shown in order are:

- Wiseman's Ferry Road looking towards [Cattai Public School](#)
- Yarramundi Bridge near the confluence of the Grose River
- Sackville Ferry
- Webbs Creek Ferry (west side)
- Windsor Bridge
- North Richmond Bridge
- Wisemans Ferry (north and east)
- Webbs Creek (east)

I took images from [Live Traffic NSW](#)'s cameras at key locations and mapped them to flood-height information from the [Manly Hydraulics Laboratory](#) and the [Bureau of Meteorology](#).

In some locations, gaps caused by low light or missing images are removed.

I think this is an original and fascinating way of seeing the effects of what turned out to be a mild-to-moderate flood on different parts of the district. Of interest is the 'double dip' in several locations and the increasing effect of tides as you get further downstream.
